Hiring Committee
Baker Tilly

Dear Hiring Committee,

Your posting describes a pivotal shift: Baker Tilly has enterprise AI infrastructure and a substantial inventory of use cases; Consulting now needs a business leader who can convert that foundation into a coherent portfolio, changed delivery economics, and sustained practice adoption. Baker Tilly's July 2026 initiative with Ode and Anthropic reinforces the same direction—AI systems built around professional expertise, methodologies, standards, and judgment.

That is the work I have prepared for throughout my career. At Vape-Jet, I lead AI-first operating transformation across production, quality, support, engineering issue flow, business systems, telemetry, and workforce routines. Through DudeWorth, I develop AI-readiness and opportunity frameworks that test value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value, and I design agentic workflows with retrieval, evaluation, human authority, escalation, and decision records. At Amazon and Compunetics, I built operating mechanisms in high-speed and high-reliability environments where strategy only mattered when it became visible work, accountable decisions, and repeatable performance.

I would bring Baker Tilly a practical value-realization discipline. Every priority initiative should make four things explicit: the consulting work being redesigned, the economics expected to change, the professional judgment that must remain visible, and the adoption evidence required before scale. This creates a sharper business counterpart for platform, architecture, data, security, legal, risk, learning, and talent teams—and a clearer decision system for practice leaders deciding where to experiment, standardize, productize, pause, or stop.

I have prepared an independent candidate vision, a Value Conversion Review, and a 120-day entry plan in this application package to make that operating approach concrete. They are not claims about Baker Tilly's undisclosed internal processes; they are a working hypothesis for discussion, grounded in the role description and Baker Tilly's public direction.

I would welcome the opportunity to discuss how Baker Tilly can make AI a force multiplier for expertise, quality, judgment, and scalable client value—not simply a faster way to produce existing work.

Carpe diem,
Russell Dudek
